Subject: GKMR6 - Summary of Tasking / Samples

Mike,

The following is a summary of the response and the impact to daily cost (note the majority of the daily cost increase is due to analytical testing).

START was tasked to respond to the Gold King Mine ER on Thursday August 6 2015.

- Initial response was for 6 responders.
- Initial tasks were to collect surface water (Animas and San Juan Rivers).
- During the following 7 days (August 7 – 14) START has been tasked by OSC Foster (REOC) to mobilize an additional 26 responders and support personnel (Data, Logistics, Planning).
- Sample collection (locations and media) is under the technical direction of the EPA Environmental Unit working in Dallas TX. The EU coordinates with OSC Foster who in turn directs OSC Hayes and START.
- Analytical test methods have not changed much during the 7 days; however, as you can see below the number of samples has continued to increase.

The following table summarizes sample collection:

CBI/Ex. 4

We understand that the Drinking Water samples may begin to taper off as START completes residential well sampling; however, these resources will be shifted to sediment sampling. Current indication is that total sample counts will remain steady moving forward.

Please let me know if you want more information. We can add more detail to the daily chronology if needed.

Cecilia Shappee, P.E.
